

**DEPARTMENT OF CIVIL ENGINEERING**

**REPORT ON SITE VISIT**

The Department of Civil Engineering had organised a Technical activity “**VISIT TO A CONSTRUCTION SITE**” for 4<sup>th</sup> Sem Civil Engineering students on 11<sup>th</sup> April 2019.

The students were taken to an ongoing construction site, construction of a commercial building near to AJ Institute of Engineering and Technology. Students were taken a subject named building materials and construction in their 3<sup>rd</sup> semester where they have got the theoretical knowledge about all the structural components of the building and this visit had helped the students to get more information practically. Visiting a real time construction project allows the student to develop a greater understanding of how civil engineering theory is put into practice.

The main objective of this visit is:

- Students have observed different techniques and activities carried out in a site.
- To explore various types of machinery and equipments used in a site.
- To have a feel of how the condition of the site really is.
- To have a up-close view of an entire building structure as opposed to see it in the building.

The students well guided by faculties of Department of Civil Engineering during the visit.
